1.	Introduction	3
2.	Market Overview	5
3.	Performance Comparison	7
4.	Glossary	21
5.	Appendix A: Replacement Ratios	23
6.	Fund Fact Sheets	

This document has been compiled with the aim of providing members of the Benchmark Retirement Fund with an overview of the investment options offered to enable them to make informed decisions regarding the investment of their retirement assets.

The following portfolios are offered to members:

Investment Portfolio	Risk Categorisation	Asset Manager's Explicit Performance Objective	Return Expectations derived from Historical Experience (Before Fees)
Allan Gray Namibia Balanced Fund*	Moderate	None	CPI+5% to 6%
Investec Managed Namibia Fund	Moderate	None	CPI+5% to 6%
NAM Coronation Balanced Plus Fund	Moderate	None	CPI+5% to 6%
Old Mutual Namibia Profile Pinnacle Fund	Moderate	None	CPI+5% to 6%
Prudential Namibia Balanced Fund	Moderate	None	CPI+5% to 6%
Standard Bank Namibia Managed Fund	Moderate	None	CPI+5% to 6%
Hangala Prescient Absolute Balanced Fund**	Moderate	CPI+5%	CPI+5%
Benchmark Default Portfolio***	Moderate-Low	-	CPI+4 to 5%
NAM Coronation Capital Plus Fund	Moderate-Low	CPI+4% (1 year)	CPI+4%
Prudential Namibia Inflation Plus Fund	Moderate-Low	CPI+4%	CPI+4%
Sanlam Namibia Inflation Linked Fund	Moderate-Low	CPI+4%	CPI+4%
NAM Coronation Balanced Defensive Fund	Moderate-Low	IJG Money Market + 3%	CPI+2% to 3%
Old Mutual Namibia Absolute Stable Growth	Moderate-Low	CPI+4.5%	CPI+4.5%
Sanlam Namibia Active Fund	Low	1-3 year ALBI	CPI+1% to 2%
Capricorn Investment Fund	Capital Preservation	7 day Repo Rate	CPI to CPI + 1%

\*Segregated Portfolio

\*\*Hangala Prescient Closed since January 2017 for new investors.

\*\*\*The Benchmark Default Portfolio is a combination of Allan Gray Namibia Balanced Fund (Segregated) (50%), Prudential Namibia Inflation Plus Fund (25%) and Sanlam Inflation Linked Fund (25%)

## Investment Returns

In order to achieve an adequate salary replacement ratio it is imperative that members achieve a real investment return, i.e. a return in excess of price inflation. Refer to Annexure A for an indication of the relationship between investment returns and the salary replacement ratio.

While a real investment return should ideally be set as the explicit performance objective of an investment portfolio, a number of investment portfolios that are suitable for retirement funds, do not have an explicit performance objective related to inflation. The member will therefore have to consider the historic performance experience of an investment portfolio in relation to inflation as a proxy of potential returns in order to link a specific investment portfolio to the salary replacement ratio. It must be noted that the historic performance experience is not guaranteed to be achieved in future. While each investment portfolio will have an internal benchmark as stated by the Investment Manager in the portfolio mandate, that benchmark may not be an explicit real investment return.

## Risk

The risk rating of an investment portfolio gives an indication of how volatile investment returns may be and therefore is also an indication of the risk that the investment return per the investment mandate may not be achieved. The risk categories have the following meaning:

- **Aggressive risk portfolios:** Short term negative returns are possible with this type of portfolio. Exposure to equities (shares) is normally maximised for these types of portfolios in order to achieve the return objective. Maximisation of equity exposure however takes place within the prudential investment guidelines laid down by the Pension Funds Act. Investment returns can be very volatile.
- **Moderate risk portfolios:** This type of portfolio will have large exposure to growth assets (shares and property) at times and as such short term negative returns are possible. Investment returns can be volatile.
- **Moderate-low risk portfolios:** This type of portfolio also has exposure to growth assets (shares and property) but typically at lower levels than the moderate risk portfolios. They aim to have minimal negative returns and therefore have a lower risk profile than the moderate risk portfolios. Investment returns can still be volatile.
- **Low risk portfolios:** This type of portfolio should have minimal negative returns over a rolling 12-month period.
- **Capital preservation portfolios:** There should be no risk of capital loss on a monthly basis.

Investment return and risk are correlated; while the correlation cannot be defined in absolute terms, it is generally accepted that an investor would require compensation in the form of investment returns in return for the investment risk taken.

## Risk-Reward - Over the long term

Time Period: 01-Jul-09 to 30-Jun-18

## Risk-Reward - Over the short term

Time Period: 01-Jul-17 to 30-Jun-18

After seeing volatility return to the markets during the first quarter of the year, the markets continued their rocky road into the second quarter, mainly due to the political tensions from abroad. The Namibian Dollar also had its worst quarter in seven years.

After the decline in the first quarter, the second quarter was mixed. April saw a welcomed recovery, with equities up across the board, as well as property after its large decline. However May saw a decline again, nearly wiping out a lot of the gain made up during April. Year to date, the Namibian equity markets managed to remain positive with the Local NSX and Overall NSX up 5.3% and 0.8% for the year respectively, but the JSE was down over -1.7% for the year. Internationally, markets have benefited from the currency weakness, returning 11.4% measured in local currency.

The market sentiment in June was largely driven by the erratic behaviour of US President, Donald Trump, starting with his aggressive stance at the G7 meeting, followed by the trade battles with China. The historic summit between the US and North Korea left many underwhelmed, whereas in Europe, Italy's new coalition government confirmed that it had no intention of leaving the Eurozone, but markets still rumbled. However, the end of June brought a bit of a respite as Trump seemed to soften his stance on additional investment restrictions on China.

In line with industry expectations, the US Fed raising interest rates to 2%, while the ECB indicated that it would wind down its quantitative easing, by its €30 billion-a-month bond-buying program by December, due to inflation rising toward their 2% target. This translated into a massive sell-off in emerging markets. A number of countries, such as India, Turkey, Indonesia and Argentina, increased interest rates to protect their currencies, however Namibia kept theirs constant.

The Namibian Dollar was not sheltered from these commotions, as it was pummeled over the quarter, with large flows moving to safe haven assets. The Namibian dollar depreciated 10.6% for the quarter, however this has contributed positively to the returns from offshore investments.

GDP data revealed the Namibian economy contracted by -0.1% for the first quarter of 2018, due to the decline in mining and manufacturing, as well as in wholesale and retail sales. However, it is an improvement from the previous quarter, which showed contraction of -1.5%, thanks to some improvement in the construction sector, which had significantly detracted from the economy's growth in the previous quarter.

After 14 straight months without an increase, Namibian inflation increased slightly to 3.8% in May, from 3.6% in April. The largest increases coming from food & non-alcoholic beverages and alcoholic beverages & tobacco. The increase in the oil price could fuel further inflationary pressures going forward.

The Bank of Namibia kept interest rates at 6.75% as well as the prime lending rate at 10.50% during May, with the attempts of supporting economic domestic growth and safeguarding the level of foreign reserves.

The Local and Overall NSX Indices delivered negative quarterly returns of -0.92% and -5.8% respectively, industrials being the largest detractor at -21%, followed by financials at -8.5%. The UG Bond Index started the year strongly, but fell by -1.1% in quarter 2 of 2018. However it still managed to return a positive figure year to date at 3.5%.

## Performance Comparison

### Moderate Portfolios

Asset Allocation as at 30 June 2018 as compared to 30 June 2017

#### Notes 30 June 2018:

- Allan Gray: International Cash represents Africa and Foreign ex-Africa
- Allan Gray: International Other represents Property, Hedged Equity & Commodities
- Allan Gray: Other represents SA and Namibia Commodities
- Allan Gray: International Equity represents Net Equity
- NAM Coronation Balanced Plus: Other represents Commodities and Preference Shares and International Other represents Property.
- NAM Coronation, Investec and Prudential uses derivatives to gain additional exposure to certain assets beyond 100%. Thus the cash allocation has an offsetting negative exposure, representing the liability or cash that is 'owed' for these assets. The total thus represents the "Notional Cash Value" for the entire effective derivative exposure.
- Investec: Other represents South African derivatives.

#### Notes 30 June 2017:

- Allan Gray: International represents Africa and Foreign exAfrica
- Allan Gray: International Other represents Property, Hedged Equity & Commodities (13.3%)
- Allan Gray: Other represents SA and Namibia Commodities
- Allan Gray: International Equity represents Net Equity (17.6%)
- Standard Bank Managed: International Other represents Unit Trusts and Property
- EMH Prescient: International Other represents Collective Investments and Other represents Forwards, Swaps and Derivatives
- NAM Coronation Balanced Plus: Other represents Commodities and Preference Shares and International Other represents Commodities and Property.
- NAM Coronation uses derivatives to gain additional exposure to certain assets beyond 100%. Thus the cash allocation has an offsetting negative exposure, representing the liability or cash that is 'owed' for these assets. The total thus represents the "Notional Cash Value" for the entire effective derivative exposure.
- Prudential : International Other represents Property
- Investec: Other represents South African derivatives.

# Performance Comparison

## Moderate Portfolios

### Asset Allocation as at 30 June 2018 as compared to 30 June 2017

### Geographical Split as at 30 June 2018:

**Notes:**  
 Allan Gray: 2.6% African  
 Hangala Prescient: 4.6% African

## Performance Comparison

The following graph illustrates the changes that were made to the managers' asset allocation over the 12 month period ending **30 June 2018**. In the event that the allocation to an asset class was decreased, the change would be indicated on the left hand side of the vertical axis, and vice versa.

### Change in Asset Allocation

Standard Bank and Hangala Prescient showed the most changes over the period, however, a few of the changes were due to reclassification of assets on the international side. All portfolios increased their Namibian cash, except for Investec who was the only portfolio to increase international cash. Investec, Prudential and NAM maintained little or no exposure to South African bonds, whereas Standard Bank was the only one to increase this asset holding. NAM has the highest derivative position with a negative cash holding, however this position has decreased. Prudential and Allan Gray made the least changes over the year.

## Performance Comparison

### Moderate-Low Portfolios

#### Change in Asset Allocation

The following graph illustrates the changes that were made to the managers' asset allocation over the 12 month period ending **30 June 2018**. In the event that the allocation to an asset class was decreased, the change would be indicated on the left hand side of the vertical axis, and vice versa.

Prudential made the most changes over the year, with the largest decrease coming in South African bonds in favour of Namibian bonds. This portfolio also had a significant increase in South African and Namibian cash, with a general decrease in international assets. Sanlam and NAM Coronation Capital Plus were the only portfolios to increase their international assets, with Sanlam increasing across all international asset classes, and NAM increasing international equities. This is unlike the other NAM portfolio, NAM Coronation Balanced Defensive, which decreased international equities. Sanlam made the least changes over the year, followed by NAM Coronation Capital Plus.

## Glossary

**Asset Allocation:** The weighting of assets in an investment portfolio amongst different asset classes (shares, bonds, property, cash, and international investments).

**BEASSA All Bond Index (ALBI):** Bond Exchange Actuarial Society of South Africa Index.

**Balanced Fund:** An investment portfolio that spreads its holdings over a range of asset classes, which typically include shares, fixed interest, property, international securities, and cash.

**Benchmark:** An index or other market measurement that is used by a fund manager as a yardstick to assess the risk and performance of a portfolio; for example, the All Share Index is a commonly used benchmark for Domestic Equity portfolios.

**Bottom-up Analysis:** A form of security analysis that begins with forecasting returns for individual companies, then moves to industries and, finally, the economy as a whole.

**Capital Preservation Portfolio:** Portfolios that provide investors with a 100% Capital Guarantee (i.e. initial investments + contributions + percentage of bonuses received).

**FTSE/JSE All Share Index (ALSI):** A “basket” of shares representing all the shares on the JSE. This index is used as a measurement to indicate price movements in the market.

**Growth Style:** Growth style managers identify companies with above average earnings growth, which they believe will be reflected by the price in future. These shares usually have a higher P/E ratio as the price is higher due to earnings being generated at a fast pace.

**Growth at a Reasonable Price:** An investment style in which the manager selects shares where the company is growing profits, but the share price is not over-priced relative to that growth or shares of which the P/E ratio is below that of the index.

**Inflation (CPI):** The consumer price index represents the increase in the price of a “basket” of basic goods and services e.g. food, petrol. It provides an indication as to how fast prices are increasing in the economy.

**Institutional Investor:** An organisation whose primary purpose in investment markets is to invest its own assets or those that it holds in trust for others. Institutional investors include fund managers, life companies, retirement funds, banks, etc.

**JP Morgan Global Bond Index:** An index which can be used to measure global bond market movements. Countries’ bonds across the globe form part of the index, each carrying a certain weight in the index.

**Market Value Adjustment:** A term used with smooth bonus products. All disinvestments which are not for benefit payment (ie switches, terminations) will be paid out at the lower of book or market value. Genuine benefit payments are defined to be payments iro resignation, death and retirement.

**Median:** The middle value that exceeds half of the values in the sample and which is exceeded by the other half. For example, if five items cost R20, R80, R100, R300, and R500 respectively, the median value would be R100, whereas the mean would be R200.

**MSCI World Equity Index:** An index which can be used to measure global market movements. Countries across the globe form part of the index, each carrying a certain weight in the index.

## Glossary

**NSX Index:** A “basket” of shares representing all the shares on the Namibian Stock Exchange. This index is used as a measurement to indicate price movements in the market.

**Price Earnings Ratio:** A stock's market price divided by its current or estimated future earnings per share. The PE ratio is used by the investing public as a measure of the attractiveness of a particular share versus all other shares. The lower the ratio relative to the average of the share market, the lower the market's profit growth expectations.

**Prudential Unit Trust:** A unit trust which complies with Regulation 28 of the Pension Fund Act.

**Regulation 28:** The regulation in the Pension Fund Act providing guidelines for the investments of retirement funds.

**Strategic Asset Allocation:** The composition of an asset mix within a portfolio, constructed with the aim of meeting the long-term objectives of a fund, rather than being based on short-term views of relative performance of the various asset classes. Usually a benchmark is derived in this fashion.

**STeFI:** Short Term Fixed Interest Index. An index used to measure performance for short term (cash) investments.

**Top Decile:** A statistical measure dividing a sample into ten numerically equal groups. Thus, ‘top decile’ means the top 10% of a given sample.

**Top-Down Analysis:** A form of security analysis that begins with forecasting broad macroeconomic trends, then assessing the impact on industries and, finally, on individual companies.

**Tactical Asset Allocation:** A process by which the asset allocation of a fund is changed on a short-term basis to take advantage of perceived differences in relative values of the various asset classes. TAA can also be described as the variation of asset allocation around the strategic asset allocation.

**Upper Quartile:** A statistical measure dividing a sample into four numerically equal groups. Thus, 'upper quartile' means the top 25% of a given sample.

**Value Style:** Asset managers who have a value style identify shares which trade below intrinsic value in the belief that the share price will return to its intrinsic value. These securities usually have low prices relative to book value or earnings.

**Volatility:** A measure used to define risk which refers to the degree of fluctuation of returns over a specified period (normally short-term). The higher the volatility, the higher the fluctuation of returns which is associated with greater uncertainty of expected returns. This scenario is defined as being high risk.

## Appendix A: Replacement Ratios

The following table represents some salary replacement ratios:

<b>Assumed NET Contributions towards retirement i.e. AFTER all costs for risk and administration etc. (as % of pensionable salary)</b>					
<b>Assumed Investment Return for 30 years before retirement (after fees)</b>	<b>8%</b>	<b>10%</b>	<b>12%</b>	<b>14%</b>	<b>16%</b>
CPI + 5%	47%	59%	70%	82%	94%
CPI + 4%	39%	49%	59%	69%	79%
CPI + 3%	33%	42%	50%	58%	67%
CPI + 2%	28%	35%	42%	50%	57%

The Trustees consider an appropriate post retirement income to be 60% of pre-retirement pensionable income after 30 years of service (assuming that 2% accumulates for each year of service). This ratio is defined as the salary replacement ratio. The above table shows a range of ratios for various net retirement funding contribution rates in relation to real investment returns, assuming retirement at age 60. Other assumptions are:

Pre-retirement:

- **Real rate of return before retirement is dependent on the investment portfolio chosen;**
- Salaries are assumed to increase in line with price inflation. In order to assess the impact of a salary increase of 1.0% per annum above inflation, one needs to look at a 1.0% per annum lower real return (e.g. if the targeted real rate of return on the selected investment portfolio is CPI + 4% then one needs to look at the results of CPI + 3% in the above table to see the salary replacement ratio if salaries increase 1.0% per annum above price inflation);
- No break in service or 100% preservation of accumulated fund credit where there is a change of employer;
- Full fund credit available on retirement (one-third and two-thirds) is used to generate the pension;
- Effect of tax is not taken into account.

Post retirement

- Single life with-profit annuity is purchased at age 60 years;
- Allowance for future pension increases is approximately 2/3rds of price inflation.

# Benchmark Retirement Fund Default Portfolio

## Fund Information

Fund Size	N\$ 850m
Risk Profile	Moderate-Low
Benchmark	NAM CPI + 4 - 5%

## Portfolio Description

The Default Portfolio has the following objectives:

- To reduce volatility of returns
- To achieve a real return of 4% (net of fees) over a rolling 3 year period
- To reduce risk of large negative returns over rolling 12 months
- To reduce risk by spreading assets between more than one investment manager

## Asset Allocation

The Default Portfolio has a risk profile lower than that of the moderate risk portfolios and as such the expected long term returns should also be lower. The Trustees use their absolute discretion in selecting the best manager offering and reserve the right to appoint or replace Asset Managers at any time. The default portfolio consists of a combination of Allan Gray Namibia Balanced (50%), Prudential Inflation Plus Fund (25%) and Sanlam Namibia Inflation Linked Fund (25%).

**Fees:** Weighted Average (Allan Gray 0.60% p.a domestic assets and 1% to 2.5% on international assets, Prudential Inflation Plus 0.60% p.a. on average month end market value, Sanlam Namibia Inflation Linked Fund 0.55% p.a. domestic assets and 0.80% p.a. international assets).

# Old Mutual Namibia Absolute Stable Growth

## Fund Information

Fund Size	N\$ 8 300 m
Risk Profile	Moderate
Benchmark	Nam CPI+4.5%

### Portfolio Description

Old Mutual Namibia Absolute Stable Growth Portfolio target returns in excess of inflation over the long term, while significantly reducing the short-term volatility associated with balanced market-linked investments. Specifically, it targets a return objective of Namibian inflation plus 4.5% over a rolling 3 year period, while offering a guarantee of 80% on capital and contributions.

It offers stability by means of smoothing of returns, whereby a Bonus Smoothing Reserve is maintained to absorb the impact of high peaks and low troughs often experienced in the market, thus reducing short-term volatility. However due to this smoothing technique used, it has an additional fee over and above the investment management fee, namely a capital charge. This charge is 0.7% p.a. Bonuses are declared monthly in advance, gross of investment fees and net of the capital charge.
